STUDENT

SUBJECT

Dear Dr. Professor,

I am a year student at university majoring in major. How you found out about the professor's research. Expression of interest in specific paper or topic. I would appreciate the chance to talk with you about your research in topic of interest and about possible undergraduate opportunities in your lab.

My experience in research experience or class, confirmed my intention to develop my research skills and goal. I know you are very busy. We could schedule an appointment or I can drop by your office hours on day and time.

I have attached my resume and unofficial transcript. Please let me know if there is any other information I can provide. I look forward to talking to you soon.

Best,

Welcome

I am happy that you've chosen to take Regression Models, part of the Johns Hopkins Data Science Specialization on Coursera! This course presents the fundamentals of regression modeling that you will need for the rest of the specialization and ultimately for your work in the field of data science.

We believe that the key word in Data Science is "science". Our course track is focused on providing you with three things: (1) an introduction to the key ideas behind working with data in a scientific way that will produce new and reproducible insight, (2) an introduction to the tools that will allow you to execute on a data analytic strategy, from raw data in a database to a completed report with interactive graphics, and (3) on giving you plenty of hands on practice so you can learn the techniques for yourself.

Regression Models represents a both fundamental and foundational component of the series, and it presents the single most practical data analysis toolset. Using only a bare minimum of mathematics, we will attempt to provide you with the fundamentals for the application and practice of regression.
